Tactical Computing Laboratories

Tutorial Series

- Level 0: Introduction to System Architect
- Level 1: System Architect Design Concepts and Developing a basic RISC processor
- Level 2: Instruction-Level (StoneCutter) Implementation Concepts
- Level 3: Advanced Design Concepts
- Level 4: System Architect Plugins and Integrating External RTL
- CoreGenPortal Tutorial

System Architect Using the CoreGen Portal

Modular, High-Level Design Concepts

Tactical Computing Laboratories

Installation

- The CoreGen Portal can be installed from source code or from pre-built binaries.
- Source Code:
 - First install CoreGen from <u>https://github.com/opensocsysarch/CoreG</u> <u>en</u>
 - Next install CGPortal from <u>https://github.com/opensocsysarch/CoreG</u> <u>enPortal</u>
- Pre-Built Binaries
 - Binaries for your platform can be found in the system architect release repo <u>https://github.com/opensocsysarch/Syste</u> <u>mArchitectRelease/tree/master/CoreGenP</u> <u>ortal/x86_64</u>

Running the portal

Once you have installed the Portal it can be run from the command line with the commit '\$ CoreGenPortal'. The window to the right should appear.

Parts of the Portal: Node Tree

The Node Tree will display all of the Nodes in your IR.

The tree can be expanded to show a list of the types of nodes.

The tree will allow you to create new nodes and edit existing nodes

Starting a New Project

Click the Project tab and select new project

This will open a create Project dialogue

Starting a New Project

The New Project dialogue will allow you to create the name and select the type (SoC, Module Extension, UNK) of the project

Give the project a name, select SoC and click OK

| Welcome to CoreGenPortal! | | | |

Clicking the Nodes dropdown arrow will display a list of the types of nodes that can be created.

Right click a type of node and click Add Node to bring up an Add Node dialogue

Clicking Add Node will display a dialogue box with all of the relevant fields for the node type you are trying to create

Try clicking save with all of the fields empty

With a node added you can click on the arrow next to the node type to view all the nodes of that type

With the Cache Nodes Tree open, right click the cache that we just created and Select Node Info. This will open a dialogue with editable node information

The Node Info window contains several editable text boxes that display information about the Node

Try entering a non-integer into the sets or ways box and clicking save

Just as with the Add Node window, any boxes with invalid information will be highlighted red and an error message describing what is wrong will be added to the Log Pane

Change the non-integer to a new integer and click save

The Cache Node and IR will automatically be updated and saved when you click save with valid information in all fields

Deleting a Node

Navigate to the node that you would like to delete in the Node Tree then right click it

Select Delete Node from the popup that appears

Deleting a Node

The Node will be deleted from the tree and the yaml will be updated
